1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 6, 2006 has been entered.

2. The following is an examiner's statement of reasons for allowance:

Applicant's arguments against the references to Himes et al (5,380,706) and Himes (5,197,544), as applied in the final rejection, are noted and concurred. In this regard, it is further noted that, while brine treatment fluids are commonly used in the well treatment or stimulation art(s), which would seem to encompass the newly-added limitation in independent claims 1 and 13 of "one or more salts in an amount up to about 3.5% by weight of the aqueous fluid", the primary references to Himes et al and Himes appear to specifically preclude the use of an additional salt component when employing one of the specific quaternary or modified-quaternary chloride or acetate compound(s), required by independent claims 1 and 13. As noted by applicant, Himes et al appears to limit the halide content or presence of halide to that provided by the quaternary halide compound, while Himes specifically teaches against the use or inclusion of a salt component(s) in his well treatment fluid containing the quaternary chloride or acetate compound. Thus, both Himes et al and Himes appear limited to utilizing fresh water as the aqueous medium in their well treatment fluid.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
